

Cyberoam Partners with TheGreenBow to provide IPSec VPN Client

(Ahmedabad, India – 12 July, 2006)

Elitecore Technologies, vendor of identity-based integrated security appliances, has teamed up with TheGreenBow to offer IPSec VPN within the Cyberoam Unified Threat Management (UTM) appliances.

TheGreenBow, a leading software editor of desktop and laptop security solutions headquartered in France, has provided its OEM VPN technology for Cyberoam's new IPSec VPN Client.

"TheGreenBow's state-of-the-art VPN Client complements Cyberoam's high-performance, best-of-breed features, empowering us to offer a complete VPN solution to our clients," says Harish Chib, VP-Marketing, Elitecore Technologies, vendor of Cyberoam. "Also, our OEM agreement with TheGreenBow enables us to offer an open standard VPN client to support any IPSec VPN Gateway and Router, providing a true multi-vendor solution to enterprises."

TheGreenBow IPSec VPN Client provides full IPSec and IKE support, strong network authentication, strong network encryption through DES, 3DES, AES and RSA, support for multiple connection types like dial-up, DSL, Cable, GSM/GPRS and Wi-Fi and multiple connection modes along with centralized management of security policies and complete ease of configuration.

"Security solutions are often too complex and are thus rejected by the end users. Elitecore Technologies and TheGreenbow have proved that security can be highly efficient yet simple and accessible to end users even without a technical background" says Jerome Chappe, co-founder of TheGreenbow. "We were impressed by the efficiency of Elitecore Technologies' teams during the preparation of the new Cyberoam VPN Client and are proud that our technology was chosen to bring a powerful solution to their clients worldwide. "

Cyberoam solution auto generates the configuration file for the VPN client, eliminating the need for technical know-how and simplifying configuration. Cyberoam IPSec VPN delivers secure, encrypted tunnels with high performance and low bandwidth requirements. Cyberoam VPN supports IPSec, in Tunnel or Transport mode as well as Layer Two Tunneling Protocol (L2TP).

Cyberoam provides security to more than 1000 corporates, educational institutes and government organizations globally.

About Elitecore Technologies

Elitecore Technologies Limited is the global provider of Identity based Unified Threat Management (UTM) solutions and Convergent Billing solutions. Cyberoam is the Identity-based UTM solution that offers Integrated Internet Security with fine granularity through its unique user identity-based policies.
